

**University of Pennsylvania School of Nursing
Technology Laboratory: Competency Evaluation Tool**

The purpose of these experiences is to introduce students to procedures commonly performed by advance practice nurses. At the conclusion of these laboratory experiences, it is expected that students will be able to:

1. State the clinical indications for each procedure
2. Discuss the relevant anatomy and physiology for each procedure
3. Identify contraindications for performing each procedure and/or possible complications
4. Demonstrate the correct technique for performing each procedure, including patient preparation and post-procedure care

For each procedure students will be given a specific competency evaluation tool. Students are to have each competency evaluated by a course faculty member. The following grading criteria will be used when evaluating each competency:

NO/NA: NOT OBSERVED/NOT APPLICABLE

- a. the student: does not need to perform task or procedure in this setting
- b. unable to be observed in this setting

0: DOES NOT MEET EXPECTATION

The student does not demonstrate knowledge and/or skill at the level that is expected at this time

1: INTERVENTION REQUIRED

The student demonstrates limited knowledge and/or skill at the level that is expected at this time.

2: MEETS EXPECTATION

The student demonstrates knowledge and/or skill at the level that is expected at this time.

3: EXCEEDS EXPECTATION

The student demonstrates knowledge and/or skills that exceeds expectation at this time

Technology laboratory experiences are graded Pass/Fail. A passing grade is obtained by achieving a 2.0 or greater in each of the evaluation indicators and is determined by the clinical faculty. Students must pass the technology laboratory experiences in order to pass N646 and/or N764.

Students must submit a copy of each competency evaluation tool to the clinical instructor at the end of each semester. It is suggested that students bring these tools to all subsequent clinical sites and every time that the skill is performed, have the preceptor evaluate this skill. Students will include these tools in the professional portfolios that will be completed in a subsequent semester.

University of Pennsylvania School of Nursing
Technology Laboratory: Central Venous Catheter Competency Evaluation Tool

Student: _____

Clinical faculty: 

NO/NA: Not observed/not applicable; 0: Does not meet expectation; 1: Support required; 2: Meets expectation; 3: Exceeds expectation

Competency	Laboratory	Clinical	Clinical	Clinical
I State 4 clinical indications for a CVC	2			
II What are the advantages & disadvantages				
a. Internal Jugular				
b. Subclavian				
c. Femoral				
III Identify common complications for CVC				
IV Obtaining consent:				
a. What is needed for CVC discussion				
b. What is needed to document				
V Identify & Demonstrate landmarks				
a. Internal Jugular				
b. Subclavian				
c. Femoral				
VI Demonstrate the correct technique for performing a CVC				
a. patient evaluation				
b. Drape				
c. set-up equipment				
d. positioning of patient				
e. skin preparation and lidocaine				
f. finder needle venipuncture				
g. large bore needle venipuncture				
h. guidewire feed				
i. skin incision				
j. dilator				
k. catheter placement				
l. Suture & dressing				
VII Determine needed components for procedure note
